This camera is designed for high-resolution qualitative capture of brightfield and moderately bright fluorescence images. The 6 Mega-sample, 3 Shot color image capture measures every pixel, doubling mosaic technology. This camera finds widespread use for photo-documentation, poster presentations, publication submit-tals, and metallurgical applications.

**Application**

**Feature** | **Benefit**
--- | ---
3 Shot image capture of 6 MPixel Samples... | More than doubles the resolution when compared to color mosaic image capture technology
1600 x 1200 @ 6 Mega-sample............... | High resolution that resolves fine detail
Programmable gain (1-16x) .................. | Allows short exposures to facilitate live mode pre-views of low light specimens
Dual Channel 18 MHz readout ............... | Produces high-speed live imaging for real-time focusing and framing
30 bit RGB color image capture ............. | Extra bit depth is ideal for image enhancement
New high quantum efficiency CCD .......... | Increases sensitivity for faster image captures
Interline progressive scan CCD ............. | Electronic shuttering eliminates mechanical shutter shortcomings related to speed, wear, and vibration
FireWire® interface .......................... | Allows for effortless installation, hot-swapping, and laptop connectivity for greater ease of use
SPOT™ Software............................... | Provides essential tools for modern microscopy and is widely supported by 3rd party software companies for high end applications
