PathSuite™ | Integrated Imaging
Enabling the Digital Pathology Workflow

The Foundation of Collaborative Diagnostics
• Just In Time Telepathology Consults
• Streamlined Imaged Acquisition
• Network Archive Management
• Common Viewer-Annotator

Step Wise, Budget Positive Implementation
Anatomic pathology is entering the era of digital workflow. This transition seeks to improve efficiencies and reduce errors while increasing collaboration and diagnostic certainty. Labs are coming to the realization that the conversion is much more than just purchasing a whole slide imager. It is a full scale change in how samples are acquired, processed and how the related images and text are reviewed and documented. New streamlined workflows that utilize teleconferencing, centralized data repositories and assisted analysis will need to be requisitioned, integrated and adopted by the staff that will use them.

SPOT Imaging provides a vision of the future with a step wise plan that produces a budget positive return on investment in each adoption period. PathSuite™ connects users and workstations to each other as well as to their data and is designed to ensure a secure manageable IT infrastructure.

SPOT Imaging, has over 50 years of development experience, listening to customers and delivering practical, cost effective solutions that are easy to implement, easy to use and easy to maintain. We invite you to join us and the large number of digital imaging partners already engaged with SPOT PathSuite™ solutions.
Building a vision of the future is essential to ensuring that each step supports the final integrated solution. PathSuite™ provides an overarching vision that supports streamlined workflows for the task at hand built into a connected environment that supports collaboration.
PathSuite™ | Modular Imaging Services

Standardized Interface from a Modular Design

PathSuite's architecture is modular, configurable and designed for IT maintainability. It provides a standardized interface that supports differing workflows across the clinical setting ensuring a seamless transition between imaging tasks. This same philosophy reduces IT implementation and maintenance costs, while allowing up or down featuring of the interface based on each user's requirements.
PathSuite™ is designed from the ground up to support interconnected workstations that can be deployed over multiple budget cycles and be upgraded as your organization progresses on its path to a full digital workflow.

**Stepwise Rollout...**

PathSuite™ addresses this issue with budget positive solutions that generate CPT revenue, reduced EFT hours while eliminating expenses, and decreasing processing errors.

**Budget Positive Implementation...**

The digital workflow will remain a dream if it lacks budget support. PathSuite™ addresses this issue with budget positive solutions that generate CPT revenue, reduced EFT hours while eliminating expenses, and decreasing processing errors.
PathSuite™ provides a simple icon driven user interface with one click access to essential controls. This makes PathSuite intuitive to learn and a pleasure to use. PathSuite supports both gross and microscopy image workflows with a common user interface making easy for user as well as support personnel to transition between systems.

**Gross and Microscopy Imaging Support:**
PathSuite’s Universal Viewer supports multiple image formats allowing its users to easily view multiple image modalities from one work station: dermatology, gross dissection, microscope slides and video recordings.

**Universal Viewer**
PathSuite’s Universal Viewer supports multiple image formats allowing its users to easily view multiple image modalities from one work station: dermatology, gross dissection, microscope slides and video recordings.

**Standard Annotations**
A full set of text and drawing tools ensure you have the arrow, text or oval to quickly and fully detail your images for consultation, publication or standard reporting.

**Extended Annotations**
Speed repetitive pathology annotations with custom text imprints, as well as auto-numbered labels, sections and blocks. Additionally, auto-imprint standard annotations with each image archived.
PathSuite™ | User Interface

Calibration Mark
Add a dimensional reference to your image with Calibration marks.

Measurements
PathSuite’s pre-calibrated images allow for easy measurement of length, area and angle.

Image Management Tools
Easily select, duplicate and move images to support your case management work. The import and export features facilitate legacy image management as well as external use of images managed by PathSuite™.

Database Archiving
PathSuite’s RDBMS database structure allows your team to manage both clinical and research workflows. Set up your database fields with check boxes, dependent dropdowns, and text input. Set the PHI status for each of the files and you’re ready to classify your images on entry, making them easy to find in the future.

Database Search and Retrieval
Search your image archive as need, when needed. PathSuite™ squarely puts your department on the path to digital workflows.
Administrators...

“...the savings we achieve with the PathSuite software makes it a no brainer investment justification. We feel that we are now a state of the art pathology operation...”
